Continuation of 11. does NOT place the application in condition for allowance because: The Examiner has considered Applicant's arguments but has found them not persuasive. On pages 6-10 of Applicant's remarks, Applicant argues that embodiment 2 of Takayama cannot be combined with embodiment 8 of Takayama, and that embodiment 8 teaches away from having a first voltage value different than the second voltage value. Further Applicant argues that the combination of these two embodiments with Takeda is improper. The Examiner respectfully disagrees, because Takayama provides motivation for combining the two embodiments in column 14 lines 29-40, where Takayama describes a specific advantage of embodiment 8 for controlling charge in the display. Further there is no reason that Takeda could not be combined with the two embodiments as described in the rejection. Simply because Takayama does not disclose the two different voltage values does not mean that two different voltage values could not be used, as described in Takeda, to drive the display. On page 10 of Applicant's remarks, Applicant argues that the references cited do not teach specific claim limitations of the invention. However Applicant does not indicate how the cited references do not teach the limitations, and so the Examiner maintains that these references teach the invention as claimed and described in the previous action.
